

## F3A-PROPELLERS OF RALPH SCHWEIZER MODELLTECHNIK

We proudly present a new prop specially designed for F3A use after intensively testing prototypes over one year. We can provide outstanding features with this new design:

- New profiles optimized for F3A use
- Very good and easy throttle behavior
- Very wide range of speed (from slower to fast flying styles)
- Aerodynamically very good design for low power consumption
- Wide range of possible motors (Q80 14XS, C50 14XL Acro Comp. even C50 13XL!!! and any outrunner designed for 21 inch props and F3A use)
- Light weight construction for best performance and weight saving (around 41 +/-3gr. for the extra light version)
- Very good braking abilities in downlines due to wide blade design
- Tested with light and heavy planes in almost any wind conditions
